

(a) Decision-level calibration

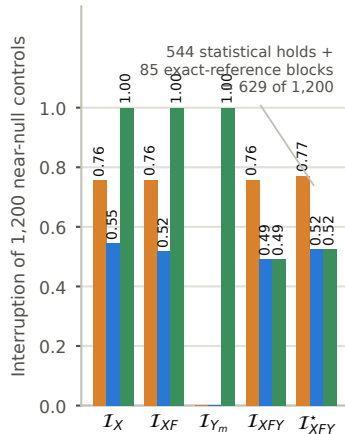

Bars: pooled rate; whiskers: range of the eight per-environment cluster means. Conformal exact level $10/201 = 0.0498$.

(b) Unsafe allow vs. clean false action

■ P1 union ■ P2 conformal ■ P3 coverage-complete abstaining

(c) Cost on near-null synthetic variation

Same 1,200 rows for every regime; synthetic near-null variation, not operational traffic.
